

ORAL FLUID COLLECTION

How to Collect an Oral Fluid Sample for Toxicology

1

Remove the collection device from the sealed bag.

2

Insert the collection device in the mouth under the tongue for a few minutes until the indicator turns from white to BLUE. *For accurate results, the device must stay under the tongue until the indicator turns blue.*

3

Place the collection device in the transport tube. Be sure it is sealed well. Place the transport tube with the requisition in the sealable bag. Refrigerate until pick up.
